Pilates is often misidentified as a women's exercise. Pilates was designed for men by a German gymnast and boxer named Joseph Pilates. Pilates emphasizes the development of your core muscles: the spine, abdominals, hips and lower back. Pilates is an intelligent way to work these muscles so that you improve the quality of your daily activities, regardless of your age, profession, or current participation in sports and exercise. Whether carrying your child, skiing or playing golf, or sitting at your desk... **you will feel the difference.**
